Technical Data

Dial Ranges

See page 4 for PGU series and page 5 for PGC series dial range information.

Accuracy

- 50 mm (2 in.) dial size: $\pm 2\%$ / 1% / 2% of span (ASME B40.100, Grade A, EN 837-1 Class 2.5, JIS B7505 Class 2.5)
- 40 mm (1 1/2 in.) dial size: $\pm 3\%$ / 2% / 3% of span (ASME B40.100, Grade B, EN 837-1 Class 4, JIS B7505 Class 4)

Operating Temperature

- **Ambient:** -40 to 140°F (-40 to 60°C)
- **Media:** -40 to 212°F (-40 to 100°C)

Temperature Error

$\pm 0.4\%$ for every 18°F (10°C) temperature change from 68°F (20°C)

Testing and Calibration

Every ultrahigh-purity and clean dry air gauge is 100 % factory calibrated and helium leak tested to a maximum rate of 1×10^{-9} std cm^3/s .

Ordering Information

Build a gauge ordering number by adding the designators as shown below. List option designators *alphabetically*.

Dial Range Designators

The selected dial range should be approximately two times the system working pressure, and the system working pressure should be in the middle half (25 to 75 %) of the dial range. Contact your authorized Swagelok sales and service representative if the system working pressure will exceed 75 % of the dial range.

Maximum pressure is limited by the end connection.
